
This is a tutorial on how to hack cs 16 server rcon password. In this tutorial I will use a steam exploit to get into a server and then use that file with the service login of either "password" or "password1". The process of getting from one user to another is as follows: 1) Log in as an admin user. 2) Launch CS16 Service Login, type in "password" or "password1". 3) In this case, I am going to launch the interactive shell as administrator. To do so you need exactly one command - /interactiveshell - this will automatically put you into the privileged mode of your system. 4) Navigate to Program Files > Steam > steamapps > common > Counter-Strike Global Offensive > csgo folder. 5) Click on the server you want to hack with Rcon. 6) Create a new text document. 7) Copy the content of the file with your rcon password into that file. 8) Rename the text document to "server" without quotes. 10) Delete any file with extension .cfg in the csgo folder. 11) Launch server and have fun!

The process is as follows: 1 - Launch CS16 Service handler "password" or "password1". 2 - Open server console and write "changelevel de_dust2". 3- Open the file csgo/csgo/cfg/server and edit it. Notepad++ or equivalent is recommended, making a backup of the old file may be productive as well.

4 - Insert the following code: bind "key" "connect 127.0.0.1:27015" (Replace key with your own) echo 1 > host_maxplayers exec ../../steamcmd/steamcmd.sh +login USERNAME PASSWORD +force_install_dir ../../steamapps/common/csgo/bin/ 5 - Create a new text document and change the following lines: bind "key" "connect 127.0.0.1:27015"" to bind your_key_here ↑↑↑ write "exec server.cfg". Click save file ↓↓↓ 6 - Finally, you need to edit the file csgo/cfg/connects.vdf, paste the following part into it (WARNING!!!): bind "key" "connect 192.168.1.254:27015" . 7 - Done! Try playing a round. The password will be copied from the server console to the clipboard. Use it in a text editor and make your changes to the file csgo/cfg/server.cfg. There are more options for this exploit, i will do another article with other methods too.

The process is as follows: 1 - Launch CS16 Service handler "password" or "password1". 2 - Open server console and write "changelevel de_dust2". 3 - Open the file csgo/csgo/cfg/server and edit it. Notepad++ or equivalent is recommended, making a backup of the old file may be productive as well.
